Core Return
Criteria**

**(450) Different Units
Available**

**Fully Tested &
Set to Factory Specs**

Dismantling and Parts Measuring.

All units are identify and serialised.
They are then fully dismantled, and inspected by qualified technicians.

Inspection and Assembly Reports

Each internal parts are measured and compared to factory specifications.
A detail inspection report is filled and save with each job 's file.

Housing & Covers Restoration

All housing and covers are completely stripped from dirt, grease,
paint and rush.

Internal Parts Restoration

All parts are re-ground to restore the original geometry and lapped.
In some cases, heat treatment is also restored.

Re-Assembly and Pneumatic Test

All unit are assembled as per the OEM's procedures and specifications.
Then they are pressurised to 25 psi and checked for possible external leaks.

Finish

All unit are primed, sealed and painted after testing as per the OEM specs.

Dynamic Test & Calibration

Adjustments are made exactly to factory specifications except the Horse
Power settings which are set to 90% of factory specs, to insure that all
remanufactured units will be functional on every machines.
In 98% of the time, final adjustment at site is not required.
