Integrated Foundry Tooling Solutions

WWW.HOOSIERPATTERN.COM

Facilities

Hoosier Pattern is currently located in a 90,000 square foot facility in Decatur, Indiana. Currently HPI houses over 25 machining centers including; Vertical machining up to 60"x100" and (3) horizontal machining centers with travels up to 49" x 40" x 34", (2) CNC lathes, 1 EDM, CMM and laser scanning verification, four (3 HPI owned) 3D sand printers, a FDM/ABS plastic printer and 1 robotic milling cell for machining sand.

Industries Served

Because of Hoosier's ability to produce tooling of many shapes and sizes, they serve a wide range of industries including automotive, consumer appliances, and agriculture.

Rapid Prototyping

Need something cast in a hurry? No time to machine a pattern or core box? Maybe you just want a couple of pieces of a new prototype? HPI has you covered. Create geometrically complex sand cores and molds directly from CAD models, eliminating the need of a physical pattern to create a core or mold.

Foundry Tooling

Hoosier strives to be up to date with the latest foundry knowledge. When it comes to customer models, HPI doesn't cut any corners. The ability to do Go To Meetings on the fly ensures jobs keep moving to meet deadlines.

Known for our quality of workmanship and commitment to "On Time Delivery", HPI has gained recognition as a premier pattern shop. With some of the latest tools in technology, HPI is able to provide you with the best quality, pricing and timing. A highly experienced staff will assist your company with "out of the box" concepts for every need. Hoosier encourages constant research for new products and procedures to stay profitable and further capabilities. The addition of a fourth 3D sand printer in house as well as a robotic milling cell and additional machining centers truly keep HPI on the cutting edge of technology.
